

Research Action Plan for Division of Laboratory Medicine (KLM)

The headings for the four sections are taken from KLM's strategy.

Section 1: Strengthen research as a foundation for future diagnostics, treatment, and disease prevention

1. Increase awareness of the Clinical Research Unit (Klinisk forskningspost)
2. Create a platform for contact between clinical operations/routine/diagnostics and research environments
3. Evaluate pilot project on press releases of research findings and possibly expand to all departments
4. Actively participate in the establishment of cell therapy at OUS

Section 2: Ensure conditions for excellent research and career development

1. Improve websites for KLM's core facilities and technological platforms in the Life Science Building
2. KLM TempAware will develop a focus area
3. Invite companies from the Research Park, innovation environments, and EATRIS to increase awareness of activities within KLM

Section 3: Increase innovation in laboratory disciplines

1. Inform line managers and research leaders about guidelines related to innovation
2. The research leader of each department facilitates the establishment of contact interfaces between clinical operations/routine/diagnostics and research groups to seek external funding for innovation-oriented research under KLM groups
3. Redistribute calls for research-driven innovation within KLM

Section 4: Utilize research activity for competency building in laboratory disciplines

1. Establish a recruitment group for academic positions that are expected to receive few applicants
2. Include research leaders/group leaders in the procurement of new routine instruments or the furnishing of new areas to identify and potentially exploit collaboration opportunities
3. Recruit students of the medical student research program and LIS candidates to research groups
