Introduction

Oslo University Hospital and the University of Oslo

Oslo University Hospital (OUH) is Norway's largest hospital with over 24 000 employees and a budget of 23 billion NOK. The Hospital has a local function for parts of Oslo's population. It has a regional function for the inhabitants in the South-Eastern Norway Regional Health Authority, and it also has a large number of national functions. The Hospital is responsible for the majority of medical research and education of health personnel in Norway.

The University of Oslo (UiO) is Norway's largest research and educational institution with 28 000 students and 7000 employees. Professional breadth and internationally recognized research environments make UiO an important contributor to society. The Faculty of Medicine was established in 1814 and works for progressive education, research and dissemination for the patients' and society's best interests.

Diakonhjemmet Hospital

The research activity of Department of Rheumatology at Diakonhjemmet Hospital is organizationally linked to Division of Orthopaedics.

Diakonhjemmet Hospital is a private, non-profit hospital with defined responsibilities for the health care system both in Oslo, in the health region as well as nationally. Department of Rheumatology has responsibility for people with rheumatic joint diseases living in the entire area of Oslo and a regional function for the inhabitants in the South-Eastern Norway Regional Health Authority. Two national highly specialized functions are located at the Hospital: The Norwegian National Unit for Rehabilitation for Rheumatic Patients with Special Needs and the Norwegian National Advisory Unit on Rehabilitation in Rheumatology.

The Department has since 2008 held the position as EULAR Center of Excellence and has in addition to patient care a strong focus on clinical and epidemiological research, education and information to patients and their relatives. Three professors; Espen A. Haavardsholm, Hilde Berner Hammer and Tillmann Uhlig, have combined positions in the Department of Rheumatology and University of Oslo.

From Division Director Rolf Riise

Being the largest hospital in Norway, Oslo University Hospital provides highly specialized health care services to the citizens of Oslo and the South-East Health Region. In addition, the Hospital has a nationwide responsibility for a number of national and multi-regional assignments. The Division of Orthopaedics (OPK) is one of 16 medical divisions. It encompasses the fields of orthopaedic traumatology, hand surgery including retransplant surgery, prosthetic surgery, oncology surgery, spinal surgery, scoliosis surgery, pediatric surgery and arthroscopic surgery.

The proximity to patients and their medical issues are the cornerstones for the research conducted at our Division, which is aimed at improving patient care. High ethical standards ensure the confidentiality, and our goal is to continuously improve diagnostics, treatment and management for all our patients.

Research activity

OPK's research activity is organized into 10 different research groups covering a broad range of basic and clinical research with an overall aim to improve patient care with emphasis on diagnostic, therapeutic and preventive measures. Most group leaders have a combined position at Oslo University Hospital and the University of Oslo. In total, the Division has 8 Professors, 4 Associate Professors, postdoctoral fellowships, several PhD students and administrative and technical staff.

The Division has an Advisory Research Board which in 2023 consisted of: Professor Lars Nordsletten, Professor Jan Erik Madsen, Professor Inger Holm, Professor Magne Røkkum, Professor May Arna Risberg, Professor Stehan Röhrl, Associate Professor Joachim Horn, Associate Professor Thomas Kibsgård, Associate Professor Gilbert Moatshe, Consultant Joachim Thorkildsen, Associate Professor Ida M. Bredesen and Associate Professor/Assistant Administrative Manager Kari Anne Hakestad.

In 2023 OPK had a of total 70 registered peer reviewed publications and 4 PhD dissertations.

Diakonhjemmet's department of Rheumatology registered 58 publications in the same period.

Lars Nordsletten

Osteoarthritis Research Group

Group Leader

Lars Nordsletten, Prof, Division of Orthopaedics, UiO (lars.nordsletten@medisin.uio.no) /
Head of R & D, Division of Orthopaedic Surgery, OUH (UXLANO@ous-hf.no)

Group Members

- May Arna Risberg, Prof
- Tore K. Kvien, Prof em
- Till Uhlig, Prof
- Inger Holm, Prof
- Ida K. Haugen, Senior researcher
- Kristin Bølstad, Research coordinator
- Nina Østerås, Professor
- Britt Elin Øyestad, Prof
- Nina J. Kise, Post Doc
- Sonia Rojewski, Phd fellow
- Bjørnar Berg, PostDoc
- Tuva Moseng, post doc
- Pernille Steen Pettersen, post doc
- Alexander Mathiessen, post doc
- Marthe Gløersen, PhD candidate
- Elisabeth Mulrooney, PhD candidate
- Heidi Gammelsrud, Research coordinator
- Elise Berg Vesterhus, Research coordinatoor

Research profile and aims

To study the etiology, treatment and prevention of osteoarthritis (OA). We are primarily studying knee, hip and hand OA.

Ongoing projects

- Training in knee OA: RCT between different training forms
- Risk factors for OA in hip, knee and hand: HUNT-NLR-OUH study and Ullensaker study
- Development of hand OA
- AktivA: implementation of treatment and prevention and registry of OA in primary care in Norway
- OMEX: RCT between traing and operation in meniscal injury
- ArtroVax: The immunological impact on OA development
- HIPARTI: Hip arthroscopy vs training

- Nor-Hand: Observational study of persons with hand OA
- MERINO: RCT studying the efficacy and safety of methotrexate in erosive hand OA
- The development of EULAR classification criteria for hand OA
- Delaware- Oslo ACL Chohort

Most important national and international collaborators

National

- The Norwegian Arthroplasty Register
- The Norwegian Cruciate Ligament Register
- The Norwegian Hip Fracture Register
- NTNU, HUNT Research Center
- FHI

International

- David T. Felson, Boston University, USA
- Martin Englund, Lund University, Sweden
- Lynn Snyder-Mackler, University of Delaware, USA
- Tuhina Neogi, Boston University, USA

Funding

- South-Eastern Norway Regional Health Authority
- Norwegian Extra Foundation for Health and Rehabilitation
- The Research Council of Norway
- Foundation of Sophies Minde
- Dr Trygve Gythfeldt and wife's Research Foundation
- Pahle's Foundation
- Simon Fougnier Hartmann's Family Foundation
- Pfizer: Global Awards for Advancing Chronic Pain Research (ADVANCE)
- Novartis: QUC knee OA study

Scientific production of the research group in 2023

Peer reviewed original research articles: 21

Selected publications:

Gloersen, M., P. Steen Pettersen, T. Neogi, J. Sexton, T. K. Kvien, H. B. Hammer, and I. K. Haugen. 2023. 'Associations between pain sensitization and measures of physical function in people with hand osteoarthritis: Results from the Nor-Hand study', *Osteoarthritis Cartilage*, 31: 1388-95

Pediatric Orthopaedics

Group Leader

Joachim Horn, Associate Professor, Section of Children's Orthopaedics and Reconstructive Surgery, UiO (joachhor@medisin.uio.no) /OUH (jhorn@ous-hf.no)

Group Members

- Terje Terjesen, Professor emeritus, UiO
- Harald Steen, MD/PhD, OUEH
- Ola Wiig, MD/PhD, OUEH
- Stefan Huhnstock, MD/PhD, OUEH
- Anders Wensaas, MD/PhD, OUEH
- Anne Berg Breen, MD, PhD-candidate, OUEH
- Anders Grønseth, MD, PhD-candidate, OUEH
- Andreas Knaus, MD, OUEH
- Vera Halvorsen, MD, OUEH
- Patrick Bjørge, PT, MSc-cand, OUEH
- Johan Brevik, PT
- Anne Marthe Svendsen Rysst-Heilmann, PT
- Sanyalak Niratiairak, PhD, Head engineer, UiO

Research profile and aims

The main intention of the group is to promote clinical and experimental research within the field of children's orthopaedics and reconstructive surgery. Core areas of research are: limb deformity (limb lengthening and growth modulation) and children's hip (Perthes, DDH and SCFE). Novel areas of research are: mixed reality/holographic technology within the field of orthopaedics and research concerning patient safety in children's orthopaedics.

Ongoing projects

1. Limb lengthening and reconstruction (Joachim Horn)

"Growth modulation in correction of leg length and axial deviations"; PhD project, Anne Berg Breen

- The timing of percutaneous epiphysiodesis for leg length discrepancy – an evaluation of four different prediction methods
- A comparison of 3 different methods for assessment of skeletal age when treating leg length discrepancies: An inter- and intra-observer study
- Comparison of Different Bone Age Methods and Chronological Age in Calculation of Remaining Growth Around the Knee

▪ Angular deformities after percutaneous epiphysiodesis for leg length discrepancy

“Idiopathic increased femoral anteversion”; PhD project Anders Grønseth

- “Derotational osteotomy in the femur with either percutaneous osteotomy and intramedullary nailing or with an open approach and plating – a randomized controlled trial”
- “Three-dimensional gait analysis before and after derotational osteotomy in patients with idiopathic increased femoral anteversion”
- “Long-term follow-up of untreated patients with increased femoral anteversion”
- “Larger Core Locking Bolts Enhance Precision in Intramedullary Nailing for Femoral Derotational Osteotomies: A Biomechanical Study”

2. Children’s hip

“A nationwide Perthes study – a long term follow-up with more than 20 years” (Stefan Huhnstock)

3. Mixed Reality, Holographic technology (Ola Wiig)

“OrthoNav-mixed reality/holographic technology in orthopaedic surgery”, PhD project Inger Gruenbeck, MSc, The Intervention Centre, OUH (Ola Wiig)

“gAlt” AI based treatment and diagnostic support for gait evaluation in children with cerebral palsy, Eirik Gromholdt Homlong, Institutt for Informatikk.” (Ola Wiig)

4. Children’s foot and ankle

“Idiopathic toewalkers: a clinical intervention study for children from 7-14 years” (Andreas Knaus)

5. Skeletal dysplasia

Establishment of a “Norwegian Skeletal Dysplasia Register” in collaboration with the Norwegian National Advisory Unit on Rare Diseases, Department of Medical Genetics and Pediatric Endocrinology. The register will be a base for broad interdisciplinary research within this field. (Joachim Horn)

“The use of gait analysis in skeletal dysplasia – a literature review”, in collaboration with ERN BOND (European Reference Network for Rare Bone Disorders) (Joachim Horn)

“Orthopaedic clinical decision making in skeletal dysplasia – a survey among ERN BOND and EPOS members” (Joachim Horn)

Most important national and international collaborators

National

- Lena Lande Wekre, MD, PhD, Norwegian National Advisory Unit on Rare Diseases
- Cecilie Rustad, MD, Dept. of Medical Genetics, OÜH
- Cathrine Alsaker Heier, Div. of Pediatrics, Endocrinology
- The Intervention Centre, OÜH

International

- EPOS Study Group Genetics and Metabolic Diseases
- International Perthes Study Group
- European Reference Network for rare Bone Disorders (ERN BOND)
- Nordic Limb Lengthening and Reconstruction Society

Scientific production of the research group in 2023

Selected publications:

Breen AB, Steen H, Pripp A, Hvid I, Horn J. Comparison of Different Bone Age Methods and Chronological Age in Prediction of Remaining Growth Around the Knee. *J Pediatr Orthop.* 2023 Jul 1;43(6):386-391. doi: 10.1097/BPO.0000000000002397. Epub 2023 Mar 20. PMID: 36941111.

Vinje S, Terjesen T, Kibsgård T. Scoliosis in children with severe cerebral palsy: a population-based study of 206 children at GMFCS levels III-V. *Eur Spine J.* 2023 Nov;32(11):4030-4036. doi: 10.1007/s00586-023-07868-1. Epub 2023 Aug 2. PMID: 37532910.

Health-related quality of life in adolescents with cerebral palsy; a cross-sectional and longitudinal population-based study. *Child Care Health Dev.* 2023 Mar;49(2):373-381. doi: 10.1111/cch.13055. Epub 2022 Sep 6. PMID: 36041889; PMCID: PMC10087639

Biomechanics Laboratory

Group Leader

Gilbert Moatshe, MD/PhD, Head of Laboratory/Consultant Orthopaedic Surgeon,
Orthopaedic Division, OUH, Associate Professor UiO
(gilbert.moatshe@medisin.uio.no)

Group members

- Sanyalak Niratisairak, PhD, Lab's Head engineer, UiO
- Lars Nordsletten, MD/PhD, Professor, OUH
- Jan Egil Brattgjerd, MD/PhD, OUH
- Endre Søreide, MD/PhD, OUH
- Jan Rune Nilssen, Eng, Norwegian Defence Research Institute (FFI)
- Kristin Jørgensen, MD, OUH
- Ingrid Skaaret, CPO/MSc/PhD, Sophies Minde Ortopedi AS (SMO)/OMU
- Anne Berg Breen, MD/PhD-cand, OUH
- Bryan Wright, MD/PhD-cand, Ringerike Hospital
- Marek Zegzdry, MD/PhD cand, Arendal Hospital
- Hannah Jahr, MD/PhD cand, Arendal Hospital
- Kaare Midtgård, MD/PhD cand, OUH

Associate group members

- Joachim Horn, MD/PhD, OUH/UiO
- Are Hugo Pripp, MSc/PhD, OUH, prof OMU
- Are Stødle, PD/PhD, OUH

Research profile and aims

Biomechanics lab at the Department for Research and Development, OUH Orthopaedic Clinic, functions as a service-unit and contributes as a facilitator/catalysator for accomplishment of various research projects within the orthopaedic community in the Oslo region. The laboratory was established back in the 1960'ies as a joint venture between Sophies Minde National Orthopaedic Hospital and UiO with 1.5 full time employees: One orthopaedic surgeon (50%) employed by the Hospital, and one Engineer (100%) employed by the UiO.

The laboratory previously organized the meetings of the 'Biomechanics Forum' 2-3 times a year during the periods 1996-2002 and 2013-2017, with a total of 31 meetings. 'Biomechanics Forum' was a multidisciplinary discussion group of professionals and students. The plan was to establish a new national forum called the 'Norwegian Biomechanics Society' (NBS) consistent with similar existing national societies in Denmark and Sweden, and with a future expectation of making a common Scandinavian Biomechanics Society. However, due to the Covid-19 pandemic the inauguration of the NSB has been postponed in 2020 and 2021.

The laboratory is furnished with technological equipment for mechanical and functional testing, and participates in planning, execution, analyses, and publishing of clinical and experimental studies.

Biomechanics lab was granted 1.37 mill NOK from the Hospital's Investment budget 2019 for upgrading of our mechanical testing machine (MTS, MiniBionix 858), located at the Institute for Surgical Research. The new equipment will be a high-speed digital image video camera with integrated 3D motion analysis for detailed documentation of the deformation process within the test object during mechanical testing. The procurement process started in September 2019, but was delayed by the Covid pandemic.

In daily clinical activity the Biomechanics lab has been part of the Paediatric Orthopaedics and Reconstructive Surgery Section at Rikshospitalet, mainly contributing with preoperative assessment of patients with limb length discrepancy and other deformities, and monitoring of patients operated with distraction osteogenesis/callotasis by use of external fixators or operated with epiphysiodesis. The biomechanical lab also performs studies related to implants used in orthopaedic surgery, ligament reconstruction and fracture fixation.

Ongoing projects

- Comparison of various methods for bone age assessment (ABB/PhD Thesis in progress)
- Time planning and treatment of epiphysiodesis - Outcome of various methods (ABB/PhD Thesis in progress)
- Biomechanical studies of bone fixation (BW/PhD Thesis in progress)
- Fixation of trochanteric fractures with gliding screw and plate
- Reconstruction of anterior cruciate ligament with both tibial and femoral fixation
- Comparison of suture tape to metal wire for tension band in olecranon fractures
- Comparison of open and arthroscopic fixation of tendon transfer for massive rotator cuff tears
- Fixation of femoral derotation osteotomies with an intramedullary nail
- Testing of a new instrument for balancing medial collateral ligament in knee prosthetic surgery
- Radiostereometric (RSA) Growth-Analyses after (Hemi-)Epiphysiodeses
- Forces, Load-share and Strain in Ankle Arthrodiatasis
- Forces, Load-Share and Strain during the Callotasis Process
- The Birch Classification for Congenital Fibular Deficiency Can Predict Treatment Modality and Clinical Outcome in Young Adults Born With Lower-Limb Deficiencies
- The Influence of an Intact or Healed Osteotomized Fibula on the Measured Load-Share Value after a Tibial Lengthening Osteotomy - A Cadaver Pilot Study
- Posterior Medial Meniscal Tears: Biomechanics and Clinical Outcomes

Most important national and international collaborators

National

- Jan Rune Nilssen, Norwegian Defence Research Establishment, Kjeller: Mechanical testing projects
- Bryan Wright, MD, Ringerike Hospital: Mechanical properties and bone mineral parameters per-trochanteric femoral fractures
- Hanna Jahr, MD, Arendal Hospital: Comparison of open and arthroscopic fixation of tendon transfer in massive rotator cuff tears
- Marek Zegzdry, MD, Arendal Hospital: Reconstruction of anterior cruciate ligament with both tibial and femoral fixation
- Arne Kristian Aune, MD/PhD, Aleris Private Hospital: Reconstruction of anterior cruciate ligament with both tibial and femoral fixation

International

- William MacKenzie, MD and Tariq Rahman, PhD, Neumors, Alfred I. duPont Hospital for Children, Wilmington, Delaware, USA: Experimental limb lengthening project
- Søren Kold, MD/PhD and Markus Winther Frost, Aalborg University Hospital, Denmark: Experimental limb lengthening project
- Stephen Grigg, PhD and Rhys Pullin, PhD, Cardiff School of Engineering, Cardiff University, UK
- Acoustic Emission Project

Research coordinator:

- Marte Traae Magnusson, PT, MSc, OUH

Research profile and aims

The overall aim of CIRRO is to perform sophisticated basic and clinical research in the field of orthopaedic surgery, imaging science and bone turnover, establish a team of dedicated researchers and collaborate nationally and internationally. Our intention is:

- To use and develop precise measurement methods in musculoskeletal research
- To study new treatment options (implants, surgical techniques, biotechnology, rehabilitation interventions and pharmacological treatment) and to ensure safe treatment to patients
- To study disease development (cartilage wear, bone loss, changes in body composition) together with other methods, in order to gain insight into mechanisms for disease and eventual treatment.
- To further develop CIRRO as a main research centre delivering sophisticated services to researchers in South-Eastern Norway Regional Health Authority and adjacent hospitals nationally as well as internationally.

Ongoing studies in 2023

Indication and Treatment of adult Kyphoscoliosis (INTRAKS study)

Midterm-evaluation by Vinjar Brenna-Hansen (May 2023). Oliver Grundnes, Vinjar Brenna-Hansen, Christian Hellum and Stephan Röhrl at Oslo University Hospital.

We also had several online meetings with our international colleagues in Sweden and Japan of this international multicenter study.

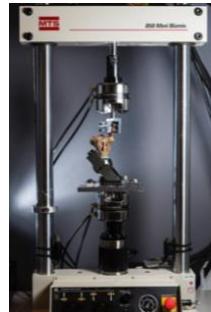

For more comprehensive information about the study:

<https://www.intraks.org/>

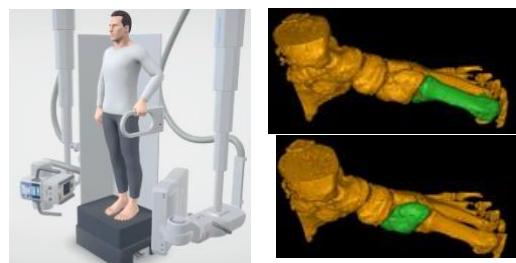

NaKiD knee study

This study of PhD candidate Lars H. Engseth includes 3 work packages which focus on surgical technique (Ligament piercing), the design of the prosthesis (Medial pivot knees) and a new imaging technique (CT-RSA). 1 and 2- years follow ups are ongoing. The 5- year follow up for 36 patients in the cemented Medacta group with the new MP knee design are finished.

Lisfranc study

The ongoing CT-based study of Magnus Poulsen in diagnostics of Lisfranc injuries included 21 patients in 2023. For more information please have a look at the studies homepage: [Lisfrancstudien](https://lisfrancstudien.no)

Trochanteric Stabilizing Plate in Pertrochanteric fractures

PhD candidate Carl Erik Alm finalizes the manuscript of his final RSA study.

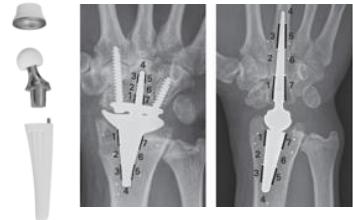

Kinematics in Total Knee Arthroplasty

We reach out to our colleagues in Århus for the possibility to use automated RSA for the analysis of our kinematic data on the Medacta knee prosthesis. Formalities and REC have to be organized. A new PhD candidate, Fredrik Bru, joins the team for this project. This is a project in collaboration with Ortoforsk-KS (Kristiansund with Frank-David Øhrn)

Investigation of the stability of hand arthroplasties (INSTHA – trial)

Wilhelm Johan Mustad starts in a research position to form his PhD on wrist arthroplasty with the register and a CT-RSA diagnostic study on possibly loose implants (TWIST-study). Additionally, a new CMC1 implant will be evaluated for safety and function with CT-RSA (StableTouch).

Surgical treatment of pelvic girdle pain

PhD candidate Engelke Randers from the spinal unit at Rikshospitalet won the prestigious research prize at Eurospine 2023 for best national spine societies presentation.

Other activities

15 year CIRRO anniversary

In January the CIRRO team marked 15 years since its founding. Many PhD candidates and researchers have contributed to and experienced the dynamic spirit of the group. The structures in its core have stayed the test of time. Teambuilding and brainstorming for the future was the focus of the day!

Orthopedic Research Society 2023

Lars H. Engseth and Stephan M. Röhrl attended at the **Orthopedic Research Society 2023** meeting in Dallas. They present their experimental study on accuracy of total knee implants in a boar knee.

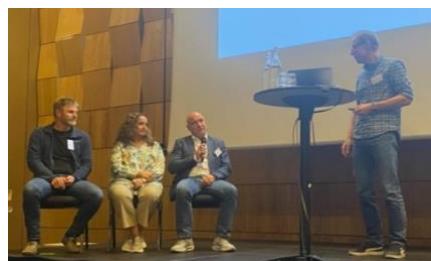

IRSA 2023 conference in Nijmegen, Netherland

Magnus Poulsen presenting his RSA study on the Lisfranc joint and Lars Engseth his methodological and experimental study. Stephan was active as chairman and as board member. Frank-David Øhrn updated his knowledge for his upcoming study in knee robotics.

NHKK spring meeting in Trondheim

CIRRO members contributed to the spring meeting of the Norwegian Hip and knee society.

OrtoForsk KS

Kristiansund sykehus established its own orthopaedic research group and CIRRO is represented by Stephan M. Röhrl in the reference group, and Frank David Øhrn in the board.

Cless TKA

The first 3D printed medial pivoting TKA study completed patient inclusion at Kristiansund hospital. Frank-David Øhrn and Prof. Otto Schnell Husby are satisfied to have completed the inclusion within 6 months.

Internal CIRRO- meeting x 2

Dario Bergadano from Medacta and Frank D. Øhrn attending from Kristiansund hospital. PhD candidates present the status quo of their studies and meet to discuss common challenges during their PhD times!

Kleivstua 2023:

4 presenters from CIRRO:

- Mid-term evaluation for *Lars H. Engseth* of the Natural Kinematic Diagnostic (NaKiD) knee study. Special thanks to *Alex Fraser* for critical and important input to keep the study on track!
- Surgical treatment of pelvic Girdle pain by *Engelke Randers*.
- Advances in diagnosis and treatment of unstable, acute Lisfranc injury by *Magnus Poulsen*.
- Arthroplasty implants in the hand, their stability and longlivity by *Wilhelm Mustad*.

Annual meeting of Norwegian Orthopaedic Society

Strong presentation of the CIRRO group with 4 presentations on CT based RSA. Anselm Schulz presents the new possibility of muscle body composition with the help of AI on CT-RSA images. (from left to right: Stephan Röhrl, Frank-David Øhrn, Anselm Schulz, Marianne Westberg, Lars H. Engseth)

Tecres Academy on THA

Stephan M. Röhrl is the invited speaker at the Tecres user meeting.

Thank you to radiographer Alexis Hinojosa

for over 15 years with RSA and DEXA. We value many memorable moments with the CIRRO group. Thank you for outstanding help with all projects over such a long time. You helped many PhD and built up CIRRO! Good luck with your new challenges in your new position.

Innsettingssymposium for Prof. Stephan Röhrl

Prof. Nordsletten with current and former CIRRO members invited to a symposium to mark the new position of StephanM. Röhrl as a professor at the University of Oslo.

Winner of the best CIRRO picture award 2023

Harald and Lars Engseth celebrating Lucia and CIRRO!

Ongoing projects an overview

Hip projects

- RCT on the function of the Trochanteric Support Plate (TSP) in combination with the Dynamic Hip Screw (DHS)
- Long time performance of Vit E infused poly in THP with different head sizes

Knee projects

- In vivo kinematics and performance of contemporary knee arthroplasty (PhD project OUH, in collaboration with HF Møre Romsdal)
- Kinematic RSA of three different kneedesignes (collaboration with Lovisenberg Hospital)

Methodological projects

- Motionanalysis with CTMA and IMA in the forefoot and the IS joint (part of the PhD projects)
- Precision of CTMA in the knee in collaboration with Kristiansund and the Radiology departments at OUH
- Experimental studies on CT-RSA with a phantom on dose reduction and precision

Ankle and foot projects

- Investigating acute Lisfranc injuries in the foot and a new surgical procedure (PhD project OUH)
- Kinematics of the midfoot after Lisfranc injury (PhD project OUH)

Hand project

- A prospective randomized trial comparing two different wrist arthroplasties (PhD project OUH)
- New diagnostics for loose implants in the hand
- Register study for wrist implants

Spinal project

- INTRAKS study on spinal deformities (<https://www.intraks.org>)
- Surgical treatment of pelvic girdle pain

Most important national and international collaborators

Research profile and aims

Sarcoma is a rare cancer with multidisciplinary care. This reflects the need for extensive cooperation between research groups.

Our strategy is to contribute to national and international research projects, as well as to work for strongly integrated clinical research in the everyday running of our department. We aim to take part in a wide spectrum of research projects from basic- and translational research to prospective clinical studies and retrospective quality control studies.

Ongoing projects

- A study of epidemiology and outcome in chondrosarcoma, A post PhD study
- SACRO Sacral Chordoma: a Randomized & Observational study on surgery versus definite radiation therapy in primary localized disease. A multinational clinical trial
- NEO STS a prospective observational study looking at the safety and effect of sequential neoadjuvant chemotherapy for high grade STS
- A study of strength, balance and gait in patients with bone sarcoma around the knee
- Functional outcome after surgery for tumor in pelvic bone
- Nordic Megaprostheses Register
- National Register for Sarcoma

- Lene Solberg, Consultant, PhD
- Jan Erik Madsen, Professor UiO / Consultant OUH
- Lars Nordsletten, Professor UiO / Consultant OUH
- Olav Røise, Professor UiO
- Mads Sundet, Consultant, PhD

Research profile and aims

The Orthopaedic Trauma Research Group aims to initiate and conduct clinical and experimental trials at a high international level related to Orthopaedic Trauma. 15–25 continuously ongoing PhD projects, mainly externally financed, provide the main scientific production. Local and national registries on pelvic fractures, hip fractures and polytrauma are major contributors to high quality clinical studies.

Ongoing PhD projects

- “Does the trochanteric stabilizing plate increase stability in trochanteric hip fractures?”
Carl Erik Alm
- “Aspects on unstable distal radius”
Morten Eikrem
- “Complex fractures around the elbow”
Kristin Jørgensen
- “Primary and secondary total hip arthroplasty following acetabular fractures”
Ragnhild Kirkebø

- “Fracture- dislocations of the elbow”
Kaare Midtgård
- “Advances in diagnosis and treatment of unstable, acute Lisfranc injury”
Magnus Poulsen
- “Proximal hamstring avulsions – prognosis and treatment”
Anne Mari Rosenlund
- “Non-operative versus operative treatment of suprasyndesmotic ankle fractures”
Ola Saatvedt
- “Incidence, classification, and follow-up of acromioclavicular joint injuries”
Stein Arve Skjaker
- “Improvements in osteotomy techniques based on 3D print technology”
Geir Solberg
- “Function and complications in hip fractures”
Stian Svenøy
- “The effect of salmon bone meal on bone healing in rats”
Ole Tomelthy

Ongoing postdoc projects

- “The Hip Fracture Surgical Approach Trial”
Mads Sundet
- “Operative treatment of proximal humerus fractures with RTSA – long term results”
Alexander Fraser

Research profile and aims

The Oslo Sports Trauma Research Center was established in May 2000 at the Norwegian School of Sport Sciences as a joint research venture between the Department of Orthopaedic Surgery (Oslo University Hospital), and the Department of Sports Medicine (Norwegian School of Sport Sciences). The aim is to prevent injuries and other health problems in sports through research on risk factors, injury mechanisms and prevention methods, with a particular emphasis on football, team handball and alpine skiing/snowboarding. In addition to primary injury prevention research, our cartilage and ligament research group is focused on secondary prevention, i.e. surgical and nonsurgical treatment options to prevent future osteoarthritis.

The goal of the center is to strengthen Norwegian health research by providing a catalyst for innovation among highly-ranked researchers and delivering superior research training and mentorship. The emphasis is not only on the production of new knowledge, but also the translation of research findings into improvements in the health of Norwegians and the Norwegian health care system.

Ongoing projects

In 2023 the Oslo Sports Trauma Research Center has published 68 articles in international journals with peer review. 16 master's students have defended their master's degrees and 2 PhD student has defended his dissertation. By the end of 2023 the Center had 135 ongoing projects, 1 accepted and 23 submitted articles. In addition, 36 projects were in the planning stage and 7 projects were temporarily on hold. You can find a complete list of projects in the Center's annual rapport for 2023.

Research profile and aims

The main intention of the group is to promote clinical spine research.

Ongoing projects

National multicentre studies and PhD:

- NORDSTEN-study – clinical trials comparing the efficacy of different surgical methods for spinal stenosis and degenerative spondylolisthesis and spinal stenosis. Most hospitals in Norway performing spine surgery participate, including orthopaedic and neurosurgical departments. Christian Hellum is the leader of the scientific committee. He has been the supervisor of Ivar Austevoll and co-supervisor for Frode Rekeland and Hasan Banitalebi.
- Modic study – started in May 2015 (financed by NFR, The Western Norway Regional Health Authority and Central Norway Regional Health Authority, and including 3 doctoral students). This is a double-blind clinical trial evaluating the effectiveness of antibiotics in selected patients with back pain and altered endplate morphology. Main outcomes published in 2019. Furthermore a biopsy study on patients with Modic changes was planned in 2016, and started in 2018. Mads Peder Rolfsen is a PhD candidate in this project, supervised by Christian Hellum. AHUS, Stavanger University Hospital and Haukeland University Hospital participate in the biopsy study. This collaboration also include the department of Microbiology by Karianne Gammelsrud, Pathology and Medical Genetics at Oslo University Hospital.
- A study on patients with chronic low back pain is in planning comparing non surgical treatment with fusion surgery. The study is financed by Central Norway Regional Health Authority. Sverre Mjønes is the PhD candidate supervised by Christian Hellum and Philip Dolotowski. This is a multicenter study in collaboration with Haukeland University Hospital and AHUS. Inclusion of patients planned for 2024.
- SIFSO study – (Sacrolilac Fusion vs Sham Operation) The inclusion was finalized in October 2021. This is a double blinded randomized controlled trial comparing sacroiliac joint fusion vs sham surgery. Engelke Randers is the PhD candidate and the project is supervised by Britt Stuge, Stephan Røhrl and Lars Nordsletten. This is a collaboration with prof. Gerdhem in Karolinska Hospital in Stockholm, Sweden.
- Improving the diagnostic accuracy, reproducibility and clinical usefulness of MRI and X-ray in patients with lumbar spinal stenosis (Data from the NORDSTEN-study)
PhD student Hasan Banitalebi

Supervisor: Anne Negård, Christian Hellum, Ansgar Espeland

Status: Study started

- Study on Thoracolumbar Burst Fractures (Sunburst): Multinational RCT investigating the effect of operative vs. conservative treatment on vertebral burst fractures (A3 and A4 type fracture without neurological deficit). This Trial was designed and initiated by the Swedish Fracture Register and Professor Paul Gerdhem is the guarantor. Main site investigator: Dr Filip Dolatowski, MD PhD.
- Study of adjacent level degeneration after fusion surgery of the spine. The study is a multicenter randomized register study. The study is in planning. Simran Kaur is affiliated to SIV and Formi at OUS and planned to be PhD candidate.

Other studies and PhD:

- “Sacroiliac joint fusion for treatment of sacroiliac pain”
PhD student: Engelke Randers, resident
Supervisors: Britt Stuge, Stephan Røhrl and Lars Nordsletten
Status: Study started
- “The gluteal muscles in severe osteoarthritis of the hip”
PhD student: Kjetil Kivle, consultant
Supervisors: Lars Nordsletten, Svein Svenningsen
Status: One article published, two articles about to be written
- “Scoliosis in patients with cerebral palsy”
PhD student: Sven Vinje
Supervisors: Thomas Johan Kibsgård, Terje Terjesen, Reidun JahnSEN
Status: Study started
- “Indications and Treatment of Adult Kypho- Scoliosis” (INTRAKS Study)
PhD student: Vinjar Hansen
Supervisors: Stephan Röhrl, Thomas Kibsgård og Christian Hellum
Status: Inclusion of patients completed.

Manuscripts in preparation:

- In planning of thoracolumbar fracture study, OUH, Orthopaedic department
“Scoliosis in patients with cerebral palsy” Svend Vinje, T. Terjesen, T.J. Kibsgård
- “New insights in the prevalence of scoliosis and musculoskeletal asymmetries in adolescents with esophageal atresia” U.I. Møninichen, A. Mikkelsen, R. Gunderson, T.J. Kibsgård, L. Mørkrid, H. IJsselstjin, R. Emblem

- Inger Jord Berg, Postdoctoral fellow/MD
- Ulf Sundin, Postdoctoral fellow/MD
- Lena Nordberg, Postdoctoral fellow/MD
- Pernille Steen Pettersen, Postdoctoral fellow/MD

Research profile and aims

REMEDY - Center for treatment of Rheumatic and Musculoskeletal Diseases is a “Centre for Clinical Treatment Research”. It was established in 2022 with funding from the Research Council of Norway (128 million NOK) as a targeted, long-term investment to strengthen and further develop outstanding research and innovation environments to improve treatment. In addition, REMEDY is supported by a generous grant from the Olav Thon Foundation (32 million NOK). Diakonhjemmet Hospital is the host institution for the research center. In addition, four institutions are involved as partners - Oslo University Hospital, University of Oslo, Norwegian Rheumatism Association and the MAGIC Foundation.

Our aim is to evolve patient care in the field of rheumatology and musculoskeletal diseases (RMDs). RMDs constitute a heterogeneous group of diseases associated with significant morbidity, reduced quality of life, and increased mortality. The conditions have major consequences for society and the individual.

We seek to develop novel therapies and excellent treatment strategies by adopting a comprehensive research approach to the field, organized in seven workpackages. We strive to conduct clinical studies that have the potential to change clinical practice.

Please see [the REMEDY annual report for 2023](#)

Ongoing projects

- NOR-DRUM study (Therapeutic drug monitoring RCT)
- NOR-DMARD study (longitudinal follow-up after drug intervention)
- ARCTIC-REWIND (Drug tapering in RA, RCT)
- MERINO (first-line treatment of Hand osteoarthritis)
- NOR-CACTUS (comparing treatment strategies for Carpal Tunnel Syndrome)
- The Norwegian part of NORD-STAR (first-line treatment of RA, RCT)
- NOR-GOUT (longitudinal study on gout patients)
- ATACC-RA (cardiovascular risk in RA)
- SURF-RA (cardiovascular risk in RA and related diseases)
- NORA
- NOKAR-project (Prevention of cardiovascular disease in RA)
- Nor-vaC
- RIMRA
- ARCTIC-FORWARD
- NOR-SPRINT
- ReMonit
- NOR-CACTUS
